

Thank you for purchasing a Vet-Pen. Your dedication to our product enhances our resolve to deliver top-notch writing gear. We're on standby to support you in all your writing operations!

M A I N T E N A N C E P R O T O C O L

Your Vet-Pen is a precision instrument and, like any piece of standard issue, requires regular upkeep. To maintain operational readiness and high visual standards, polish your Vet-Pen using a high-quality metal polish, such as Blue Magic Metal Polish. This will ensure your pen's aesthetic appeal matches its performance on the field.

Standard Refill Procedure

Objective One

Take hold of your Vet-Pen's lower casing, executing a firm pull on the top shell. This maneuver will reveal the twist mechanism and the ink cartridge, identifiable by its black cap in the lower structure.

Objective Two

To remove the expended ink cartridge, secure your hold on the lower casing. Now, commence a counter-clockwise rotation on the black cap. You will observe it loosening and disengaging from the pen's barrel. You are now clear to extract the ink cartridge from its position.

Objective Three

In order to replenish your ink supply, identify a slimline style 7mm ink cartridge. Carefully maneuver it back into the twist mechanism and initiate a clockwise rotation. Continue this action until the cartridge is firmly secured within the pen's barrel. The cartridge must feel secure; this is non-negotiable.

Objective Four

After successful insertion of the new cartridge, re-engage the top casing with the twist mechanism. This completes your mission of installing the new ink refill.
